

To use this report template there needs to be a LaTeX processor installed on your server system.

For Windows operating systems use MikTeX (<http://miktex.org/download>). Make sure you install all packages right away and do not select the "load packages on demand" option.

For most Linux systems there are ready to install packages. For example, for Debian and Ubuntu you can use the **texlive-full** package using the standard apt-get installer.

For OS X systems use the MacTeX package from <https://tug.org/mactex/>.

If you want to create your own templates you need to have a LaTeX distribution on your local computer.
